- PROD : <https://portal.api.ehealth.fgov.be/>

2. Updated features

2.1. Extra dose

2.1.1. New code extra dose creation

A new command has been added to create the new code extra dose:
commands/bulkVaccinationCodeCreation/byOldestPersonsFirst

This command can only be used by Smals to create the codes as necessary.

2.1.2. Activate by oldest

The method activate by oldest now supports a new parameter: campaign.

The possible values are:

- INITIAL (used by default when the parameter is not present)
- EXTRA_DOSE_1

2.1.3. List schedulable vaccinations

A code for campaign EXTRA_DOSE_1 is eligible for invitation when the person has received the second dose after some time:

- 4 weeks for people with health priority
- 4 months for people who received a AstraZeneca or Johnson&Johnson second dose
- 6 months for people who received a Pfizer or Moderna second dose

The people are returned by oldest people first in their categories.

The priority algorithm for categories is:

1. People with health priority
2. Others

2.2. Search business events

The search parameter nihii of the method /vaccination/v1/vaccinations/events now allows to only look for the 8 first digits.

This change allows to retrieve the events even when the specialization of the doctor changes the last 3 digits of the full nihii number.
